

Primary Care

“MediNotes e allows me to code accurately, with less hassles and I have completely done away with transcription. That alone has saved me more than \$9,000 a year.”

John E. Kazilionis, D.O.

“Medinotes has changed the way we practice. I think it has allowed my nurse practitioner and myself to leave the office earlier each evening.”

David R. Buyer, M.D.

Simply the right choice.

With so many electronic medical record systems on the market today, it's difficult to wade through the features and functionality of each system to make sure that it fits the needs of your busy practice. MediNotes e has been specifically designed to stand out in the market, with a design that eliminates navigation and makes multi-tasking a reality.

While other EMRs are confusing and require your staff to migrate from screen to screen for the right information, MediNotes e is a fresh new EMR design which utilizes a "tab" concept for simplicity and ease of navigation. Just as tabbed browsing is improving multi-tasking for internet users, tabs in an electronic medical record allow you to multi-task like never before. MediNotes e can display multiple patients, encounter notes, workflow items, patient flow, messages, alerts, and more, all in accessible tabs within the MediNotes e shell.

MediNotes e is "simply the right choice" because it has been designed for flexibility. Instead of forcing you to change your work processes, it molds to your practice and lets you decide how workflow and processes should be done.

The entire program has been broken into just four convenient views: Practice View, Patient View, Document View and Object View. Each section contains pertinent information in an easy to utilize hierarchical tree.

Practice View

Practice View is a global view of the events occurring within the practice. It allows your staff to review all of your: Patient/Practice Alerts, Messages, Patientflow, pending lab results from reference laboratories, automated tasks and more.

Patient View

MediNotes e is able to display multiple patients at a time, each with their own color coded tab. Patient View screens can be completely customized by the office with the data panels of your choosing. Panels can be organized into nurse intake screens or comprehensive display screens. The MediNotes e Panel Summary can be used to create printed patient summary sheets based on the custom panel data.

Document View

This global view enables your office to quickly filter all of your MediNotes e documents (by document type, provider or date) and then print to the specific printer settings designated for that document type.

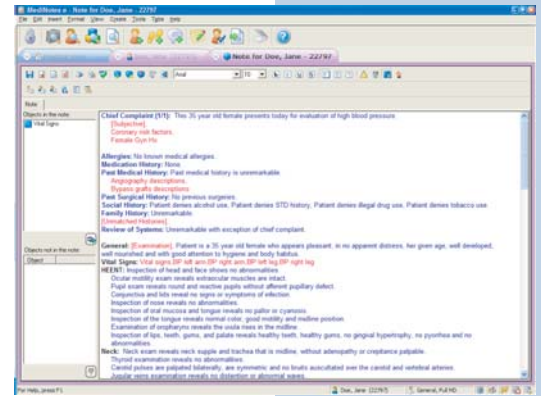

Object View

MediNotes e remains the most customizable electronic medical record on the market. The Object View gives you the opportunity to review, customize and save templates and examination dialogs in one convenient area.

e vitalize your practice

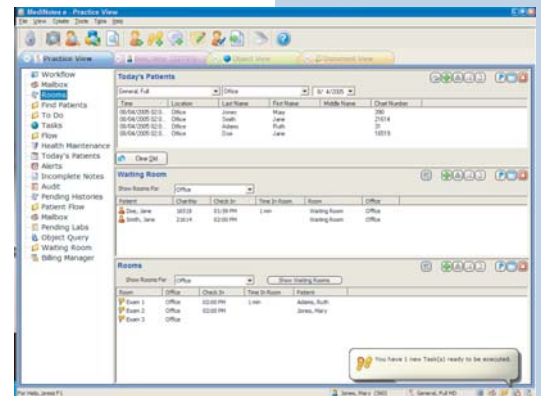

MediNotes e Features

- Minimal navigation tab-oriented design
- Single-screen, "what you see is what you get" note window
- Worklist functionality for improved workflow productivity
- Custom Patient Panel Summary
- Multiple Chief Complaints
- Patient Tracking module
- Health Maintenance Reminders
- HL7 interface compatibility
- Enabled for DOQ-IT program
- Global practice view for practice-wide administrative functions
- Multi-media storage with thumb-nail views and split-screen comparison of images
- Codified: ICD-9, CPT, SNOMED, LOINC
- Customizable data display/intake panels
- Data repopulation from the front screen and from past notes
- Graphic dialogs utilizing ADAM images
- Image annotator - images can be embedded into the patient's note
- Customizable patient instructions
- Online-update - updates all machines on the network at once
- Mailbox - secure, internal messaging
- Document View - to filter and batch print MediNotes e documents to specific printers
- Problem List - Free-text and structured

MediNotes e Benefits

- Minimal navigation reduces initial learning curve, improves acceptance and increases productivity
- Tabbed design improves accessibility and allows users to multi-task
- Worklists ensure that clinical tasks are performed for each visit
- Saved notes are digitally signed and can only be changed by creating a note addendum
- Lab result interface ensures that lab data is reviewed promptly and added accurately to the patient's record
- ePrescribing module warns against harmful interactions and advises on proper formulary data
- Eliminates costly transcription
- Designed for Tablet PC use - point-of-care design ensures that critical information is entered accurately
- Health Maintenance reminders ensure patients are made aware of beneficial preventive check-ups
- Coding is linked to documentation for more accurate codes and Peace of Mind during documentation audits
- Certified for HIPAA: audit trail, one-key logout, timed logout
- Electronic backup to safeguard your records against fire or natural disaster
- Interfaces with over 40 Practice Management Systems

MediNotes e Expansion Modules

- **MediNotes e Rx** - electronic prescribing through the SureScripts hub. Provides drug interactions, formularies and Palm access.
 - **MediNotes e Sync** - provides true remote access: any time, anywhere. Access your patient data at the hospital or on-call without a network or phone connection.
 - **MediNotes e Report** - customizable, multi-variable reporting tool. Query your patient records with pinpoint accuracy. Helpful for drug recalls and practice trending analysis.
 - **MediNotes e Security** - enables practice administrator to control accessibility to features by user or group.
 - **MediNotes e Scan** - comprehensive document management program integrated with MediNotes e for a truly paperless office.
 - **AppointmentsPRO** - patient appointment management software integrated with MediNotes e. Allows front staff to quickly find available appointments. Exports schedule to MediNotes e Patient for the day.
- ### Other Interfaces
- Quest Lab Results interface
 - Labcorp Lab Results interface
 - MidMark ECG/Spirometry Interface
 - Welch Allyn ECG/Vital Signs Interface
 - Canfield Image Management interface
 - Marco RT900, RT2100, RT5100
 - Huvitz CDR-Mate
 - Zeiss Humphrey Field Analyzer 750i and 740i
 - Over 40 PMS interfaces
